The RNA-binding protein *Igf2bp3* is critical for embryonic and germline development in zebrafish

Yin Ho Vong, Lavanya Sivashanmugam, Rebecca Leech, Andreas Zaucker, Alex Jones, Karuna Sampath

Lateral view image of an *igf2bp3* mutant zebrafish embryo at 3 hours post-fertilisation, with β -Catenin labelled membranes (green) and nuclear DAPI (blue), showing expansion of the extra-embryonic yolk-syncytial layer.
